

EXPLORE TO UNDERSTAND, SHARE TO CHANGE

The Tara Ocean Foundation is the first public interest foundation in France dedicated to the Ocean. A schooner designed for scientific research and defense of the environment, Tara has been sailing the seas and Oceans of the world since 2003. Our dual mission: Exploring the Ocean to better understand it, Sharing scientific knowledge to raise public awareness.

SCIENTIFIC EXPEDITIONS

Since 2003, the Tara Ocean Foundation has been conducting scientific expeditions to study marine biodiversity as well as observe and anticipate the impacts of climate change and pollution. From the Arctic to the Pacific, passing through the Mediterranean, we explore the Ocean to understand its mysteries.

THE INVISIBLE LIFE OF THE OCEAN

Every liter of sea water contains between 10 and 100 billion microorganisms. They represent more than two thirds of marine biomass and constitute the first link in a huge food chain. Understanding this invisible ecosystem is crucial for the future of our planet.

Tested in the ice this last summer

TARA POLAR STATION: A DRIFTING LABORATORY

Tara Polar Station is a drifting laboratory dedicated to the in-depth study of Arctic ecosystems. Designed to be locked in the ice and drift with the ice floe for 90% of its time, it will host scientists to understand the impact of climate change on this sentinel region. 10 consecutive expeditions are planned until 2046.
